General

Guideline Title
Surgical safety checklist in obstetrics and gynaecology.

Bibliographic Source(s)

Guideline Status
This is the current release of the guideline.

Recommendations

Major Recommendations
The quality of evidence (I-III) and classification of recommendations (A-E, L) are defined at the end of the “Major Recommendations.”

Background

Summary Statements
- Surgery may account for up to 40% of all hospital adverse events. (II-2)
- Good communication is essential for safer surgical care, as communication failure is common in the operating room. (III)

The World Health Organization (WHO) Surgical Safety Checklist (SSCL)

Summary Statement
The concept of a SSCL has been studied globally, and there have been decreases in complications and mortality when the checklist has been implemented. (II-1)

Recommendation
1. The SSCL should be adopted by all surgical care providers and their respective institutions to improve patient safety. (II-1A)

Surgical Safety Checklist Outline

Recommendation
2. Surgeons should be familiar with, advocate for the use of, and participate in all 3 parts of the SSCL. (II-1A)
SSCL in Obstetrics

Recommendation

3. The SSCL may be modified and adapted for use in surgical obstetrics cases. (II-2A)

Emergency Cases

Summary Statement

Emergency cases such as a "crash" Caesarean section will require a modified approach that is centre- and situation-dependent. (III)

International and National Perspectives

Summary Statement

The Society of Obstetricians and Gynaecologists of Canada (SOGC) endorses the adoption of the SSCL in obstetrics and gynaecology. (III)

Definitions:

Quality of Evidence Assessment*

I: Evidence obtained from at least one properly randomized controlled trial

II-1: Evidence from well-designed controlled trials without randomization

II-2: Evidence from well-designed cohort (prospective or retrospective) or case–control studies, preferably from more than one centre or research group

II-3: Evidence obtained from comparisons between times or places with or without the intervention. Dramatic results in uncontrolled experiments (such as the results of treatment with penicillin in the 1940s) could also be included in this category

III: Opinions of respected authorities, based on clinical experience, descriptive studies, or reports of expert committees

*Adapted from The Evaluation of Evidence criteria described in the Canadian Task Force on Preventive Health Care.

Classification of Recommendations†

A. There is good evidence to recommend the clinical preventive action

B. There is fair evidence to recommend the clinical preventive action

C. The existing evidence is conflicting and does not allow to make a recommendation for or against use of the clinical preventive action; however, other factors may influence decision-making

D. There is fair evidence to recommend against the clinical preventive action

E. There is good evidence to recommend against the clinical preventive action

L. There is insufficient evidence (in quantity or quality) to make a recommendation; however, other factors may influence decision-making

†Adapted from the Classification of Recommendations criteria described in the Canadian Task Force on Preventive Health Care.

Clinical Algorithm(s)

None provided

Scope

Disease/Condition(s)
Obstetrical or gynaecologic conditions requiring surgery

Guideline Category

Management
Prevention

Clinical Specialty

Obstetrics and Gynecology
Surgery

Intended Users

Advanced Practice Nurses
Hospitals
Nurses
Physicians

Guideline Objective(s)

To provide guidance on the implementation of a surgical safety checklist (SSCL) in the practice of obstetrics and gynaecology

Target Population

Women undergoing obstetrical or gynaecologic surgery including emergency Caesarean section

Interventions and Practices Considered

Adoption and modification, as necessary, of a surgical safety checklist

Major Outcomes Considered

Impact of the surgical safety checklist (SSCL) on surgical morbidity and mortality

Methodology

Methods Used to Collect/Select the Evidence

Searches of Electronic Databases

Description of Methods Used to Collect/Select the Evidence

Medline databases were searched for articles on subjects related to "Surgical Safety Checklist" published in English from January 2001 to January 2011. Results were restricted to systematic reviews, randomized control trials/controlled clinical trials, and observational studies. Searches were

Methods Used to Assess the Quality and Strength of the Evidence

Weighting According to a Rating Scheme (Scheme Given)

Rating Scheme for the Strength of the Evidence

Quality of Evidence Assessment*
I: Evidence obtained from at least one properly randomized controlled trial
II-1: Evidence from well-designed controlled trials without randomization
II-2: Evidence from well-designed cohort (prospective or retrospective) or case–control studies, preferably from more than one centre or research group
II-3: Evidence obtained from comparisons between times or places with or without the intervention. Dramatic results in uncontrolled experiments (such as the results of treatment with penicillin in the 1940s) could also be included in this category
III: Opinions of respected authorities, based on clinical experience, descriptive studies, or reports of expert committees

*Adapted from The Evaluation of Evidence criteria described in the Canadian Task Force on Preventive Health Care.

Methods Used to Analyze the Evidence

Systematic Review

Description of the Methods Used to Analyze the Evidence

The quality of evidence was rated with use of the criteria described by the Canadian Task Force on Preventive Health Care. Recommendations for practice were ranked according to the method described by the Task Force. (See the "Rating Scheme for the Strength of the Evidence" and the "Rating Scheme for the Strength of the Recommendations" fields.)

Methods Used to Formulate the Recommendations

Expert Consensus

Classification of Recommendations†
A. There is good evidence to recommend the clinical preventive action
B. There is fair evidence to recommend the clinical preventive action
C. The existing evidence is conflicting and does not allow to make a recommendation for or against use of the clinical preventive action; however, other factors may influence decision-making

D. There is fair evidence to recommend against the clinical preventive action

E. There is good evidence to recommend against the clinical preventive action

L. There is insufficient evidence (in quantity or quality) to make a recommendation; however, other factors may influence decision-making

†Adapted from the Classification of Recommendations criteria described in the Canadian Task Force on Preventive Health Care.

Cost Analysis
A formal cost analysis was not performed and published cost analyses were not reviewed.

Method of Guideline Validation
Internal Peer Review

Description of Method of Guideline Validation
This clinical practice guideline has been reviewed by the Clinical Practice Gynaecology Committee and reviewed and approved by the Executive and Council of the Society of Obstetricians and Gynaecologists of Canada.

Evidence Supporting the Recommendations

Type of Evidence Supporting the Recommendations
The type of supporting evidence is identified and graded for each recommendation (see the "Major Recommendations" field).

Benefits/Harms of Implementing the Guideline Recommendations

Potential Benefits
Implementation of the guideline recommendations will improve the health and well-being of women undergoing obstetrical or gynaecologic surgery.

Potential Harms
Not stated

Qualifying Statements

Qualifying Statements
This document reflects emerging clinical and scientific advances on the date issued and is subject to change. The information should not be construed as dictating an exclusive course of treatment or procedure to be followed. Local institutions can dictate amendments to these opinions. They should be well documented if modified at the local level. None of these contents may be reproduced in any form without prior written permission of the Society of Obstetricians and Gynaecologists of Canada (SOGC).
Implementation of the Guideline

Description of Implementation Strategy

An implementation strategy was not provided.
